For consistency, the time derivative of the constraints of (10) must vanish and hence they must have vanishing Poisson bracket with H . Using the fundamental Poisson brackets

$$[U(x), \Pi^U(y)] = \delta(x - y), \quad (13)$$

etc., we find that the primary constraints of (10) imply the secondary constraints

$$(\Sigma, \Sigma_i) = (-\partial_k \Pi_k^V, \varepsilon^{ijk} \partial_j (\Pi_k^B - m V_k) - \mu^2 B_i). \quad (14)$$
